LIFT VS. AUGMENTATION

Which procedure will help you meet your goals?

Mastopexy vs. Augmentation: Differences and Benefits

Breasts come in all shapes and sizes. But when having babies, up-and-down weight fluctuations, and good old time and gravity, cause the breast tissue to sag and drag, you may want to consider mastopexy, also known as breast lift surgery.

If, however, you've lost volume in your breasts, have had a mastectomy, or have irregular shaped breasts, you may want to enhance your breasts through augmentation, also known as breast enlargement surgery.

Breast Lift: Are you a candidate?

The ideal candidate for mastopexy is someone with good health and skin elasticity.

If you're pregnant or planning

Book Your Consultation

to become pregnant or expect to lose a significant amount of weight, Dr. Lichten recommends that you wait until you're done with those life stages. Why? Because these events can cause additional sagging of the breast tissue.

Keep in mind that breast augmentation can be combined with mastopexy. Talk with Dr. Lichten to learn more.

About Mastopexy

Breast Augmentation: Is it right for you?

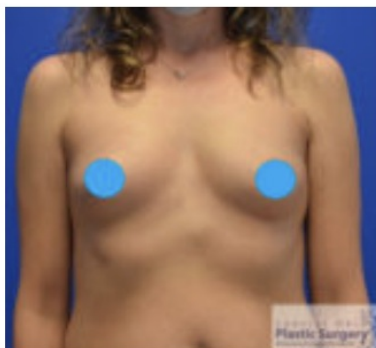

If you're in good health, have stopped smoking, and are looking to increase, even out, or enhance the size of your breasts, breast implants could be right for you.

Dr. Lichten works with his patients to understand their goals, then he discusses the patient's options, which may include adjusting the size and shape of the breasts to meet her aesthetic goals.
