NEW EQUIPMENT BULLETIN

We’re Now Offering Skin Tightening and Restoration with the TriPollar® Apollo™ Radiofrequency System

Today’s watchwords for anti-aging are *reversal* and *correction*.

Smart patients leverage the body’s regenerative powers to correct damage, keeping skin in optimum condition. This approach has two distinct advantages:

♦ It postpones the need for surgery.
♦ It means skin is stronger at the time of surgery, thus improving results.

In line with this approach, I recently purchased the TriPollar® Apollo™ Radiofrequency Laser. It’s an “all-in-one” solution to immediately and *painlessly*:

♦ Tighten skin.
♦ Restore facial contours.
♦ Remove loose jowls.
♦ Define the jawline
♦ Remove sagging and fat deposits under the chin.
♦ Smooth out wrinkles.
♦ Reverse sun damage.
♦ Remove cellulite from tummy and thighs.

With this technology, I can get you on top of the earliest signs of aging and keep you there—for a long time.
Not Your Grandmother’s Skin Care

I'm not talking about improving surfaces here. I'm talking about skin remodeling that goes deep, changing molecular structure to restore volume, elasticity and suppleness.

The goal: to keep your skin in a state of more-or-less perpetual youthfulness. When you continuously rejuvenate the “package” your features come encased in, your aging cycle changes.

You'll look and feel younger than your contemporaries. Your skin will get stronger and healthier all the time, because you're constantly re-stimulating collagen production deep inside the dermis.
Radiofrequency treatment has been around for a few years, but the Tripollar Apollo improves on earlier equipment in a few ways. One of the most potent is the addition of the LumiCam.

Let me explain. For a patient to get optimal results, the skin must reach a specific temperature. Hand-held thermometers were used in the past to monitor skin temperature, but they were prone to inaccuracy and could result in delays and disruption.

The Tripollar Apollo’s LumiCam is FDA-approved to provide real-time temperature feedback and thermal mapping. Both the operator and the patient can watch the temperature of the treatment area, in real time, to ensure the best possible results.
Review these facts and ask yourself whether this is the medical science breakthrough you’ve been waiting for.

Q: **What do the treatments feel like?**
A: Like a warm massage. It is pleasant and pain-free. Some patients even report falling asleep during treatments.

Q: **What is the down time?**
A: There is no down time. One can resume regular activity immediately after the treatment.

Q: **What should I do to prepare for the treatment?**
A: No special requirements or preparations are needed.

Q: **How many treatments are recommended?**
A: The standard protocol calls for 6-8 treatments scheduled one week apart. However, if needed, more treatments can be added according to the condition being treated. Touch-up treatments are recommended every 6 months to maintain and improve the treatment results.

Q: **How long is a typical treatment?**
A: About 30 minutes.

Q: **How soon can I see results?**
A: Most patients see visible results immediately after the first treatment. To achieve long-term results, however, you will need the full regimen of treatments.

Q: **How long will the results last?**
A: Several months. When you stop seeing improvement, it’s time to come in for refresher treatments. By repeating treatments a few times a year, you’ll continue to see improvement.

Q: **Who is an ideal candidate for treatment?**
A: Choosing the right treatment for each patient is our main priority. The Tripollar Apollo is recommended if you:

- Have maintained a stable weight.
- Aren't yet ready for surgery.
- Can't afford downtime.
- Are concerned about your skin type (treatment doesn't affect pigmentation).
- Want to rejuvenate a specific area.

Keep in mind, this treatment is **not** a substitute for surgery. After a consultation, I'll recommend the best treatment to meet your goals.

**Skin – The Foundation for True Beauty**
Lovely skin brings out the best in everyone’s features. It can make ordinary faces beautiful, and beautiful faces astonishing.

Keeping it in optimum shape is the cornerstone to aging beautifully. With the Tripollar Apollo I can help you do that.
